## Problem 3. «A long-awaited event»

Bob received from Alice the secret message

## L78V8LC7GBEYEE

informing him about some important event.
It is known that Alice used an alphabet with 37 characters from A to Z , from 0 to 9 and a space. Each of the letters is encoded as follows:

| A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 |  |  |  |  |  |
| U | V | W | X | Y | Z | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | SPACE |  |  |  |  |  |  |  |  |
| 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 | 31 | 32 | 33 | 34 | 35 | 36 |  |  |  |  |  |  |  |  |

For the encryption, Alice used a function $f$ such that $f(x)=a x^{2}+b x+c(\bmod 37)$ for some integers $a, b, c$ and $f$ satisfies the property

$$
f(x-y)-2 f(x) f(y)+f(1+x y)=1 \quad(\bmod 37) \text { for any integers } x, y
$$

Decrypt the message that Bob has received.
